CQ Researcher is often used in research for papers, college syllabi on specific issues or topics and in writing classes. It’s a must-have research tool for students studying:

⭐ Political Science & Public Policy
⭐ Social Studies & International Affairs
⭐ Education
⭐ Journalism & Composition

CQ Researcher is an award-winning online and print subscription weekly providing authoritative and accessible content and analysis on newsworthy social and political issues. Each report is an original work, researched and written by a seasoned journalist and is professionally fact-checked. CQ Researcher content is renowned for its objectivity, breadth and depth of coverage.

Let’s take a look at the CQ Researcher homepage.

CQ Researcher reports cover an array of topics including public policy, law and civil liberties, international affairs, economics, health, education, the environment, technology and more.

The home page is designed to prominently show the “Featured Report”, which is the current week’s report. The name of the report, which hyperlinks to the full report and a short summary are shown first.
To the right, we have “Hot Topics”. Here, researchers can quickly access up-to-date, abbreviated coverage of 20 of the most popular research topics and, for each, see a list of related full CQ Researcher reports published in the past. These short reports are updated at least once a year.

To better guide users through the featured report, tabs are provided for quick access to individual components, including the overview, current situation section, chronology, and Pro/Con section. Click to “more” for additional sections.

Below the “Hot Topics” is information on two “Upcoming Reports”.

Right below the “Featured Report”, we have links to the three most recent full CQ Researcher reports.

**PRO/CON:** One of the most used sections of the CQ Researcher report is the Pro/Con section. Pro/Con allows researchers to gain insight by exploring opposing sides of an issue. Students taking debate classes have found it particularly helpful when structuring their arguments.
Under **Using CQR** dropdown, you will see the menu for the “How to Cite.” We have resources showing various citation styles.
